

≡ KITCHEN DISPLAY SYSTEM

LET YOUR TEAM FOCUS ON COOKING, NOT COUNTING.

OrderCounter Kitchen Display Systems (KDS) make it easy for your back-of-house staff to efficiently fulfill dining, takeout and delivery orders.

Instead of hunting through tickets and trying to tally everything up, you can simply hit a button on the KDS screen and all of your orders will be visible. Know exactly how many entrees and apps you need to have fired up at any given moment so one guest's food doesn't get cold while another is still on the grill.

- » **Keep your kitchen running smoothly**
- » **Improve communication between FOH and kitchen staff**
- » **Can work alongside or in place of** kitchen printers on any type of touchscreen tablet
- » **Kitchen staff can review orders** by their priority, group, add specific notes and modifiers to each order, transfer orders from one screen to another
- » **Set timed prompts** – The tickets can be set to prompt the server then ringing up apps on whether the app is as an entrée so that the kitchen can focus on the apps first and release the entrees all at once.
