CUT THE CORD AND GET OUT OF THE OFFICE ONCE IN A WHILE

While OrderCounter runs on an in-house server, the system functions as your
personal cloud, allowing you to view your data anywhere from any device.

» **Dashboard** – View up-to-the-second analytics on the day's sales and who has clocked in.

» **Hybrid Remote Backoffice** –The OrderCounter hybrid system means that data stays at the restaurant computers and is accessed through the cloud. OrderCounter empowers restaurants to retain rights and ownership of their data on their own system while still providing the convenience of the Cloud.

» **Inbox Reports** – Schedule custom report configurations to send on a scheduled basis to select individuals on a recurring basis. Inbox reports ensures that PDF reports are ready in our email inbox on time every time.

» **Employee Oversight** – Drill down easily on employee performance reports to distinguish the super-star employees from the wash-outs. Want to know who is upselling wines and spirits? What about who has the most dissatisfied customers? Our employee performance metrics allow drill-down details. View every action from an employee summary to transaction level details.

» **Security** – OrderCounter's backoffice can be configured with SSL communication, managed networking, and two-factor authenticated access options.

» **Inventory Anywhere** – OrderCounter sports a native inventory product that can manage recipe level inventory as well as tracking and crating supplier PO's. OrderCounter makes this platform available anywhere via Remote Backoffice. Stop being tied to the restaurant and the office for busy inventory management work. Enter this data when and where it is most convenient.

» **Menu Management** – OrderCounter has spent 12 years consulting on technology needs in restaurants to produce a mature menu management structure that supports the speed, details, and mobility required in fast paced restaurants. Make advanced changes in real time from anywhere. Forgot to set up the daily special and add a Valentine's day promotion? No problem! Complete menu management functions from any computer, tablet, or phone.

» **iPad, iPhone, Android, Mac, and
   PC compatible**
